

Logikos and IPFW: A Valuable Connection

June 2016

Staying Local. Going Global.

Gregg Weisman, IPFW alumnus and president of Logikos Product Software Solutions Inc., found the resources his company needs to compete in a global market right here in northeast Indiana.

Logikos is a leading company in custom software design, development, testing, and systems integration. Since its founding in 1978, Logikos has partnered with mid-range to Fortune 500 companies—connecting homegrown talent with clients all over the world.

Invaluable Connections, Top-Notch Degrees

Logikos employs several IPFW alumni who have connected with the company a variety of ways; Career Services' events being one way.

Weisman notes that Career Services has been instrumental in recruiting new hires and fresh perspectives. "We're fortunate to partner with IPFW," he says. "Students with roots in the area graduating with top-notch Indiana University and Purdue University degrees is a big plus."

Reciprocity to Enrich the Future

By partnering with the university, Logikos follows a philosophy of reciprocity: dedicating time to mentor engineering, business, and computer science students now, so that they'll be prepared to enrich the region—and the industry—in the future.

More than 50% of IPFW graduates live and work in northeast Indiana, suggesting that the university's diverse curriculum options and opportunities for networking with industry leaders continue to support the evolving needs of regional employers. And giving back to his alma mater is particularly important for Weisman. "I still want to be connected with IPFW," he says. By providing mentorship opportunities and actively recruiting recent IPFW graduates, Weisman found a unique way to demonstrate his pride as an alumnus in a meaningful way. Now in its 38th year, Logikos continues to engage with IPFW to **cultivate world-class talent, right here at home.**
